

Lone Star Analysis Promotes Eric Haney, Ph.D. to Deputy Chief Technology Officer

DALLAS (PRWEB) July 31, 2018

As [Lone Star Analysis](#) continues to grow its technology portfolio, the Dallas-based specialist in leading-edge predictive and prescriptive analytics solutions is making moves to strengthen its leadership team. To do this, the company recently promoted Eric Haney, Ph.D., from analyst to deputy chief technology officer.

“We invest heavily in our analytics platform, tools and processes,” said Steve Roerman, CEO and chairman, Lone Star. “Naming Eric as deputy CTO is the next step in our deep commitment to growing our tech, research and development, and intellectual property, and will help lead us to the goals we’ve established for Lone Star this year and into the future.”

Haney first joined the company in June 2014. He has quickly risen through the ranks and was responsible for developing a modeling efficiency tool that reduced construction time of large analytic models from months to days.

“Eric has been a major influence on the direction of our delivery and tech teams,” said John Volpi, CTO, Lone Star. “Even though he’s been assigned to one of our business lines, his leadership has impacted the whole company. He’s played a key role in client engagements, and we’re lucky to have someone of his caliber ready to step into this role.”

Haney received his bachelor’s and doctorate’s degrees in aerospace engineering from Texas A&M University and the University of Texas at Arlington, respectively.
